

PDMA: Mem to Mem

› **Description:**

- This example demonstrates the memory transfer to peripheral (UART) via PDMA.

› **Target Device:**

- Traveo-II CYT2B9x devices

› **CPU Board:**

- CYTVII-B-E-1M-176-CPU Rev. C Board

PDMA: Mem to Mem

› **Dependency:**

- Any example could be copied to the main “src” based on the interested core.
- Connect a micro-USB cable between the board J12 and the PC
- Open a serial terminal (hyper terminal or a putty etc.) and configure the USB-UART COM port with the settings – Baud rate: 115200, Data: 8 bit, Parity: None, Stop bit: 1 bit, Flow control: None.

› **Expectation:**

- Run the program
- After 2 sec, DMA transfer (36 byte) starts. User should be able to see the transfer in the serial terminal screen.

PDMA: Mem to Mem

> Legend:

- Red block for power, debug and USB (Mandatory)
- Yellow block for the example specific connections
